Global Fairs. Global Business.

Deutsche Messe

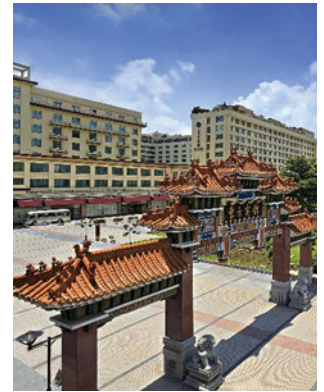

LIGNA

A large international presence and all-round expertise – this is what everyone associates with LIGNA. The innovative design and technology of the products and systems on display here, together with the caliber and international provenance of the exhibiting companies, reinforce the global reputation enjoyed by LIGNA as the top event for the industry worldwide. Only at LIGNA are all the suppliers of technology for the timber and furniture industries represented. Only here you will find the world's most comprehensive array of machinery and tools. And only here you can learn about the latest innovations, new products and production standards.

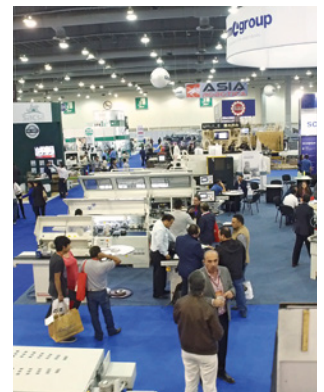

LIGNA Conference

After its premiere in 2016, the second edition of the international LIGNA Conference is back to gather about 300 regional experts of the wood processing and furniture industry and its suppliers under the LIGNA focus topic “Integrated Woodworking – Customized Solutions”. They will discuss strategies to meet the rising demand for individual, customized production from a batch size 1 up to mass production with the networking of suppliers and customers. Digitization in the sense of the “Industry 4.0” theme – both in industry as well as in upscale crafts operations – requires intelligent automation technology and customization.

MAGNA EXPO MUEBLERA INDUSTRIAL

This expo provides a high-impact showcase of the latest machinery, materials, products and new developments within the international furniture industry. Face-to-face encounters amongst industry professionals, manufacturers, distributors and suppliers foster open communication where all questions get answered. The value of attending is that, this is a “tried and proven” means of establishing new contacts, opening new markets and increasing sales volumes. Great benefit and satisfaction are reaped by the performing actors on the stage of world furniture.

SibWoodExpo

SibWoodExpo, which celebrates its 26th anniversary in 2019, is the number one sourcing platform for Siberia. The show features the full range of timber harvesting, processing and construction systems, equipment and materials. Siberia's Irkutsk region is the recognized center of the Russian Federation's forestry industry and well known for its wealth of high-quality timber resources. Russian sawmills and forestry companies will have to modernize in order to remain competitive. This opens up interesting opportunities for mechanical and plant engineering firms.
